

StreakFreePro Microfiber Cloth

What is MicroFiber & How Does It Work?

The first thing you need to know is that not all microfiber cloths are made the same way.

Our Streak Free Pro Cloth has been the most effective cleaning and polishing cloth on the market for the last 5 years.

The StreakFreePro Cloth is a patented, exclusive technology that makes it the best cleaning cloth in the industry today.

The fibers of the Streak Free Pro Cloth are processed in such a way that they are able to grab and hold dirt, dust and grime. This is the magnet effect.

Does it work? We Guarantee It!

Depending on how a microfiber cloth is put together determines it's quality. Some repel dirt, dust and grime. Some repel water. The Streak Free Pro absorbs water, oil, dirt, dust & grime.

Here is what people are saying!

Here a couple emails I have received recently:

Hi Glenn,
Just to let you know that I received my order. My aunt ordered from you and told me about the streakfree cloths so that's why I ordered. I really like them. They make cleaning so much easier. Thanks for getting them to me so fast.

- Betsy
Highland Park, IL

Glenn,
Received order yesterday. Used right away and I am pleased... I was visiting a friend in Davenport Fla. and she had one and loved it so I took the information off the paper she had... I will spread the word... Thanks.

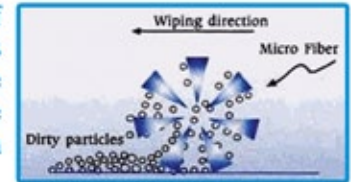

- Jacqueline

Our Streak Free Pro Cloth contains millions of tiny 'scoops' that pull dirt and dust up inside the cloth where they remain until washed away. Results are clean, streak free surfaces. Water acts as a 'lubricant' which helps emulsify dirt & oil making it easier for the Streak Free Pro Cloth's ability to pick up the dirt, grease & grime from your surfaces. The cloth's high absorbency will quickly clean up spills.

The Streak Free Pro Cloth with the exclusive technology holds 7 times its weight in dirt, grime and liquid. Each fiber in the cloth is 200 times finer than a human hair! (this is the secret of it's incredible cleaning ability). Open spaces between fibers hold dust, dirt, and oil until washed away with mild soap or detergent.

Spaces also allow large amounts of moisture to be collected into the cloths making them very absorbent. These same spaces allow for quicker drying time eliminating the bacterial growth found in slow drying cloths.

Ordinary Cloth Fiber tends to simply push dirt and dust. Residue is left behind on the surface you are cleaning. Lack of interior spaces makes ordinary cloth hold very little dirt or moisture.

The average home contains 62 toxic chemicals. In fact, a recent EPA survey revealed that the air indoors was 2 to 5 times more polluted than outdoor air! We breathe in 10,000 to 20,000 liters of air per day. 90% of that is indoor air for most people.

The full health effect of all these chemicals may never be known. The main source of these chemicals is thought to be from household cleaning supplies and products. Household cleaners have become the number one cause of poisoning accidents in children!

Streak Free Pro Care:

Machine wash with laundry detergent or hand wash with dish soap in hot water. Rinse thoroughly. Using bleach will shorten the life of your micro fiber cloths. Do not use fabric softener (fabric softener leaves a film on the cloth and decreases its effectiveness). Be careful when machine washing or drying in mixed loads as the Streak Free Pro Cloths will pick up lint from other fabrics. Air-dry.
